

◆ System Resource Tracking

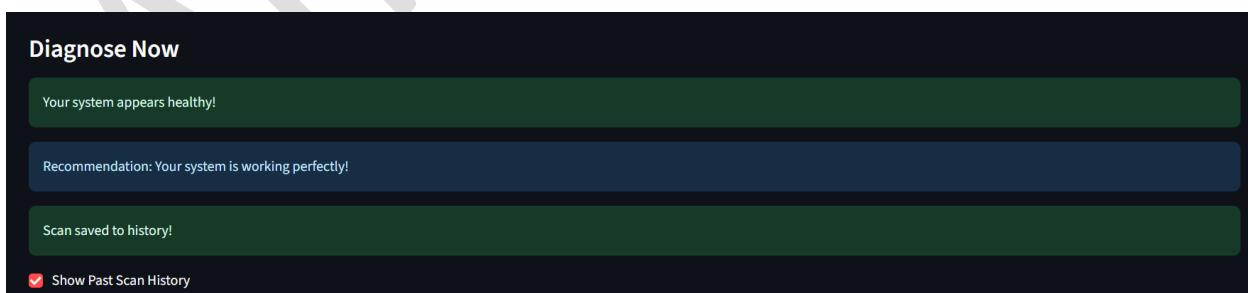

The dashboard provides real-time tracking of **CPU, RAM, Battery, and Disk** usage.

◆ Health Diagnosis

The application can diagnose your system health and provide instant feedback.

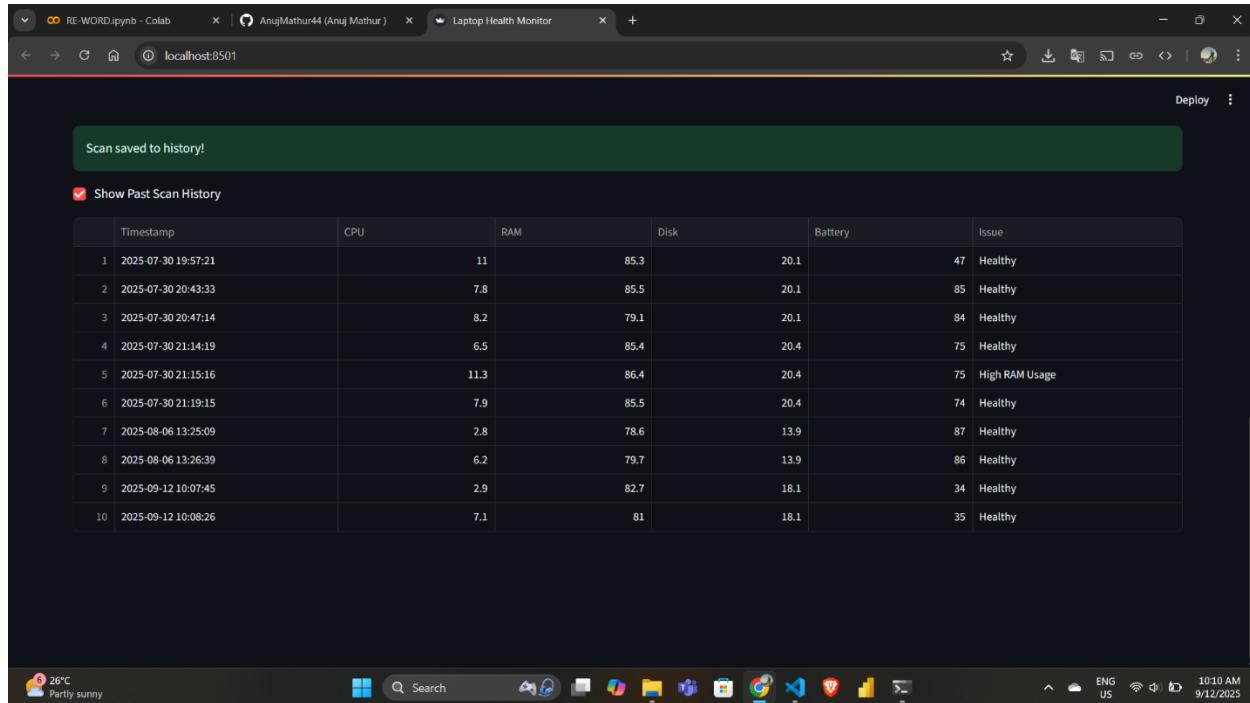

- Shows if your system is healthy
- Recommendations for better performance
- Saves scan results for future reference

◆ Past Scan History & CSV Export

You can view all previous scans in a **tabular history** that shows CPU, RAM, Disk, Battery stats, and any detected issues.

Additionally, the records can be **downloaded as a CSV file** for further analysis.

Scan saved to history!
